

Structure Reasoning /Step By Step Prompting

1. Generate Automation framework Architecture

Prompt:

Context

Act as an Automation Architect to design the Automation framework architecture

Instructions

[MANDATORY] Ask 8 multiple choice questions

[MANDATORY] Once after answering the current question,then ask the next

[CRITICAL] Generate Automation Framework Architecture and a downloadable folder structure for the same

Response:

Question 1 of 8

Q: What type of application are you automating?

A: API / Microservices

Great choice! API/Microservices automation it is. On to question 2!

Question 2 of 8

Q: What is your preferred programming language for the automation framework?

A: Java

Java it is — a solid choice for API automation! Question 3 coming up.

 Question 3 of 8

Q: Which API testing library/framework do you prefer?
A: REST Assured

REST Assured — the gold standard for Java API automation! Question 4 next.

 Question 4 of 8

Q: Which test runner and reporting framework will you use?
A: Cucumber (BDD) + TestNG

Excellent! BDD with Cucumber + TestNG — great for readable, business-friendly test specs!
Question 5 up next.

 Question 5 of 8

Q: Which build and dependency management tool will you use?
A: Maven

16:43   

Maven — perfect for dependency management! Question 6 coming up.

Question 6 of 8

Q: Which CI/CD platform will the framework integrate with?
A: GitHub Actions

GitHub Actions — modern and seamless! Question 7 next.

Question 7 of 8

Q: Which reporting tool do you want integrated into the framework?
A: Extent Reports

16:44   

Extent Reports — rich, interactive dashboards! Last question coming up.

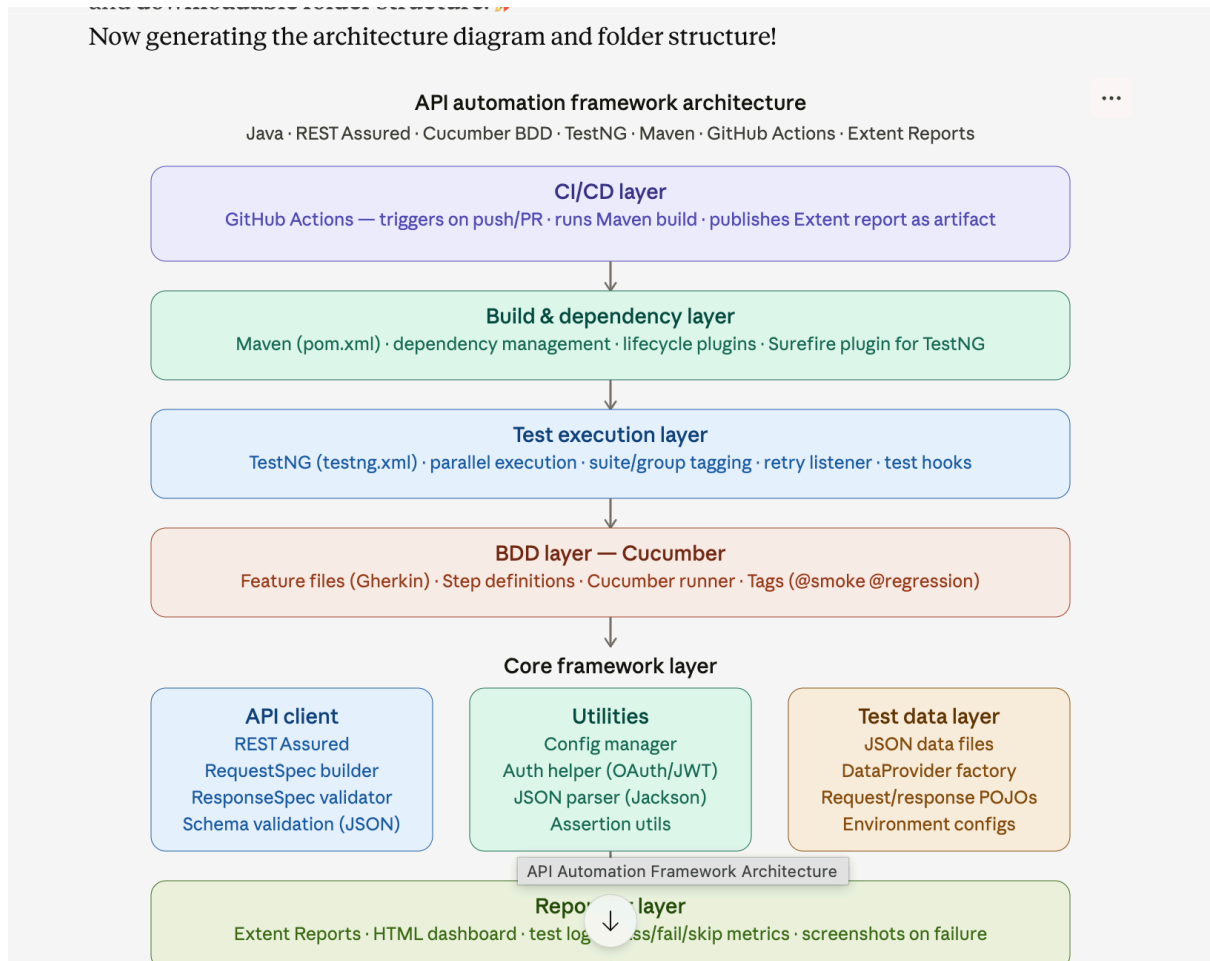

Question 8 of 8

Q: How will test data be managed in the framework?
A: JSON

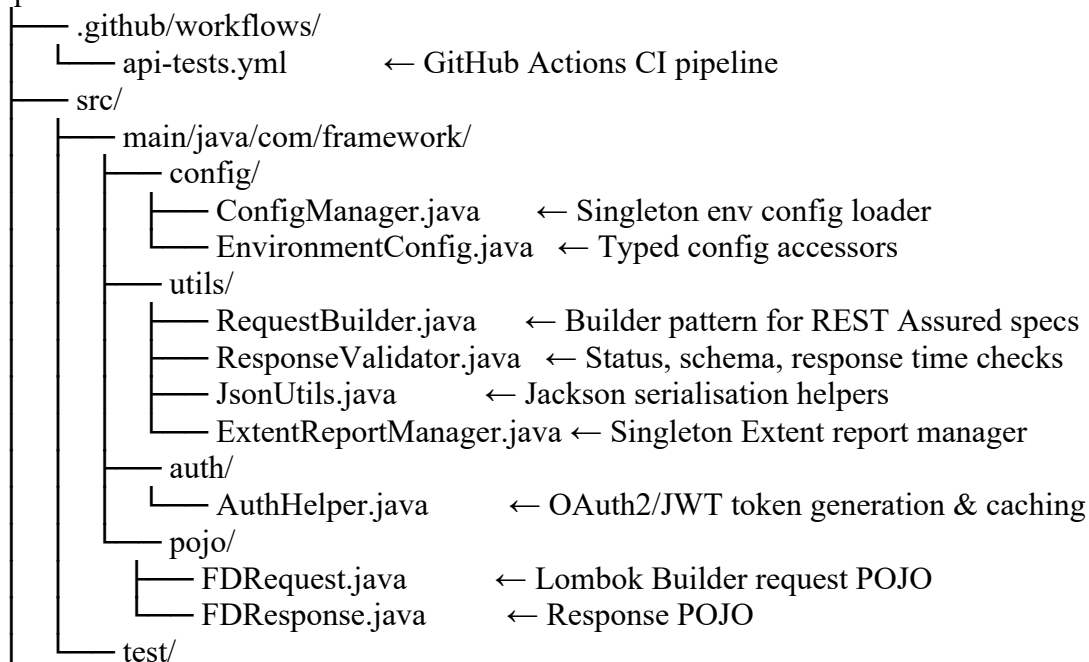

Perfect! All 8 inputs collected. Now generating your **Automation Framework Architecture** and **downloadable folder structure!** 

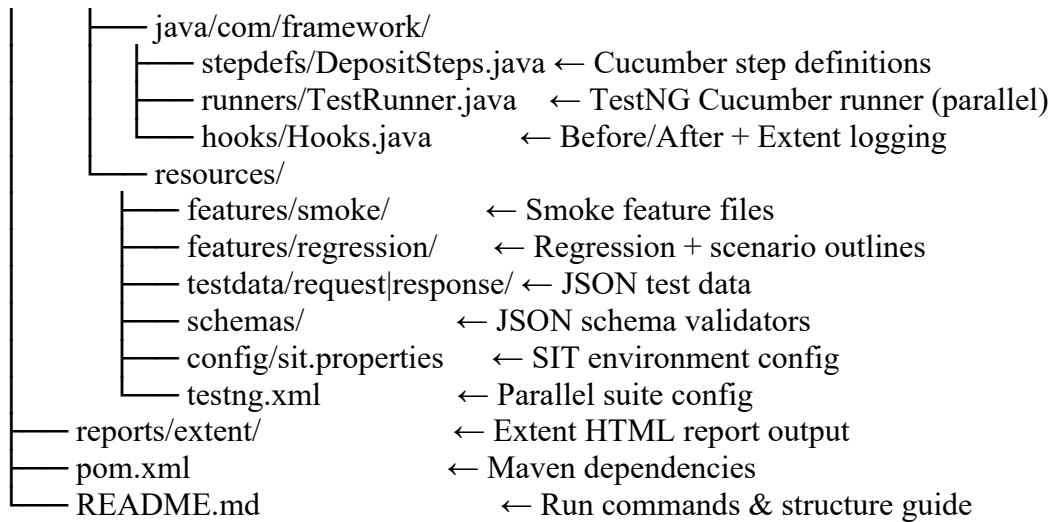

Now generating the architecture diagram and folder structure!

Automation framework – Tree structure:
